Micrium S.p.A.

Legal Headquarters: Viale Beatrice d'Este 20, 20122 Milan • Italy

Head Office: Via G. Marconi, 83 - 16036 Avegno (GE) • Italy

V.A.T. CEE IT01199870104, Fully paid-up Share Capital 2.000.000 euro • Fiscal Code and registration to Business Reg. • Ge n° 01199870104 - R.E.A.265808

Micerium S.p.A. refers to quality as a fundamental principle for its business.

We consider the term 'quality' to mean guaranteeing our customers innovative products and services that meet or even exceed their expectations, in compliance with applicable regulatory requirements and in terms of usability and safety.

Micerium S.p.A. pursues a constant quality improvement policy which is implemented with the involvement of every resource operating within the company.

The Management deeply commits in organizing and developing its assets, including both the internal and external company's resources, such as representatives and suppliers, and to continuously improve the professional level of its staff to meet and satisfy customers' expectations, providing a wide range of high-quality product solutions and more efficient services and decreasing complaints and non-conformities.

All the staff members are committed to working to their best and to achieve the highest standards within the company. To reach this objective, Micerium S.p.A. strives to maintain a high level of working environment over time.

Micerium S.p.A. also aims to propose to the dental industry high quality products which are used with modern and advanced techniques, which are, at the same time, simple and reproducible.

To achieve all the above-mentioned goals, Micerium S.p.A. also pursues a constant training process addressed both to the sales group and its customers, organizing and supporting courses which guarantee an improvement of the professional level of dentists and dental technicians.

Micerium S.p.A.

Maria Picarelli

Chairman of the Board of Directors

A handwritten signature in black ink, appearing to read 'M. Picarelli', is placed over the printed name and title.

GRUPPO
MICERIUM

The headquarters

Micerium S.p.A. was born and developed in the territory of the wonderful Ligurian Riviera, it has an operational headquarters with a large and organized warehouse for the storage and distribution of products, an excellent sales service through its sales representatives, an in-house graphic office that manages the preparation of brochures, course programs and advertising, as well as a tele-marketing department to support distribution.

Micerium S.p.A. is a company operating in the dental field for more than four decades, whose activity consists in the design and manufacturing of medical devices for the dental industry and in the marketing of medical devices and products for the dental field under other or its own brand name.

Since 2012 it has started the design and sale of oral hygiene products also intended for the public, including cosmetic products.

*Micerium S.p.A. mainly deals with three Lines: **Implantology, Orthodontics and Aesthetics.***

Quality

Micerium S.p.A. has always placed quality as primary objective, in fact all its products excel worldwide for innovation and quality. Micerium S.p.A. refers to quality as a fundamental principle for its business.

We consider the term 'quality' to mean guaranteeing our customers innovative products and services that meet or even exceed their expectations. The Quality policy is constantly reviewed and updated, ensuring its continued suitability.

This level of excellence should not only be demonstrated by the existence of a quality system throughout the organization that meets the requirements of UNI EN ISO 9001, UNI CEI EN ISO 13485, DIR 93/42 EEC (in accordance with Article 120 of the European Regulation on Medical Devices MDR (EU) 2017/745), European Regulation on MDR Medical Devices (EU) 2017/745, General Safety and Performance Requirements (GSPR) according to ANNEX I of European Regulation on MDR Medical Devices (EU) 2017/745, and other applicable regulatory requirements, such as Regulation (EC) no. 1223 /2009 and regulations of the countries involved in the MDSAP, but also measured by the degree of satisfaction of its customers.

CERTIFICATE

Our History

1977 **MICERIUM S.p.A.** was born from the vision of Dr. Jules Allemand and Mrs. Maria Picarelli as a small family business, they brought to Italy the most advanced and innovative products to provide Professionals with high quality materials and equipment.

1989 It becomes exclusive distributor for **AMERICAN ORTHODONTICS - USA**, a leading company in the Orthodontic Dentistry field, which offers a wide range of innovative products aimed at improving the quality of the work of the most demanding practitioners.

1995 **ENAMEL PLUS** aesthetic line, developed in cooperation with Dr. Lorenzo Vanini, promotes Micerium S.p.A. abroad, where it stands out among the market giants offering to the aesthetic dentistry professionals a new and revolutionary system, based on Dr. Lorenzo Vanini's stratification technique, which became in a few years a reference point in the world of aesthetic composites.

2008 Micerium S.p.A. launches **ENAMEL PLUS HRi**, the first and still the only composite in the world with the same refractive index as natural enamel.

2011 It becomes exclusive distributor for **OSSTEM IMPLANT-Korea**, the world's leading implant company with the most advanced technologies and offering some of the most innovative product lines on the market.

2012 Micerium enters the cosmetics and oral hygiene products market with the **ENA ORAL CARE** line, offering original and innovative products that achieved success in a short time due to their ability to fully meet customers' demands and needs

2013 The cooperation with Dr. Lorenzo Vanini and the University of Chieti, in the person of Prof. Camillo D'Arcangelo, gives birth to **ENAMEL PLUS HRi FUNCTION**, the only composite with an abrasion index similar to natural enamel. Furthermore, Micerium S.p.A. starts dedicating itself to the orthodontic market of invisible aligners under the Micerium Lab brand.

2017 The development of ENAMEL PLUS HRi FUNCTION leads to the new biocompatible **BIO FUNCTION** composite. Meanwhile the orthodontic division started to sell the elastic orthodontic **BIO ACTIVATOR A.M.C.O.P.** for functional dental therapy.

2018 In its path of growth and development Micerium S.p.A. acquires **SCHÜTZ DENTAL**, contributing to the completion of the laboratory Line, ensuring a high-quality digital workflow, for its customers, and of the **IMPLANT LINE** with the new developed best quality **SCHÜTZ DENTAL**.

2021 **MICERIUM ORTHODONTICS** was born, a complete orthodontic line of the highest quality. After 30 years of expertise and knowledge, Micerium S.p.A. decided to take on a challenge such as becoming a market player with a proprietary brand.

ENAMEL^{plus} HRi[®]
BIO FUNCTION

Enamel plus HRi Bio Function

Highly biocompatible composite with mechanical and functional characteristics similar to natural enamel

Completely biocompatible to guarantee a perfect integration in harmony with the human body without releasing any toxic substances. High stability resin matrix and absence of nanoparticles in the powders generated by abrasion phenomenon that could be absorbed by the body. The UDMA and TCDDMDMA innovative formula is Bis-GMA free, a monomer that can liberate Bisphenol-A (BPA), an organic compound that exhibits estrogenic properties in human body causing health problems.

Characteristics

- Highly Biocompatible, does not contain Co-monomers nor Bis-GMA
- Similar abrasion to natural enamel
- Mechanical and functional characteristics similar to gold
- Ideal polishability and high gloss retention over time
- Ideal handling: it does not stick to the instrument
- Excellent sculptibility
- Suitable for direct and indirect technique
- High Radiopacity
- Contains Fluoride

Are available:

3 enamels

- BF1 >>>> low value
BF2 >>>> medium value
BF3 >>>> high value

9 dentines

- BD0 - BD0,5 - BD1
BD2 - BD3 - BD3,5
BD4 - BD5 - BD6

Physical data

MPa

Vickers Hardness	685
Flexural Strength	150
Modulus of elasticity	11.600
Compressive Strength	460

Physical data maintained till 4 mm of depth with LED light curing unit (minimum power 1000 mW)

Clinical cases of Dr. Lorenzo Vanini

Initial case before rehabilitation

Final case after rehabilitation with direct technique in lower sector and indirect technique in upper sector

Direct composite restoration with dentine and enamel Enamel plus HRi Bio Function

University of Chieti research by Prof. Camillo D'Arcangelo

Abrasion	Depth (mm)	Volume (mm ³)
Natural enamel	0.216 (0.070)	0.404 (0.200)
Gold type III	0.219 (0.060)	0.328 (0.140)
Composite F* (enamel) light cured with Laborlux**	0.459 (0.068)	1.017 (0.239)
Composite F* (enamel) light cured with Led	0.464 (0.069)	0.972 (0.247)
Enamel plus HRi Bio Function light cured with Led	0.252 (0.059)	0.454 (0.057)
Enamel plus HRi Bio Function light cured with Laborlux**	0.212 (0.052)	0.375 (0.052)

* reference composite chosen after identified as the best among the ones tested during the preliminary phase

** curing unit for laboratory; it cures with heat (approx. 70°-80°C)

Wear surfaces

After 120.000 cycles by two-body wear test in a dual axis chewing simulator 50x SEM images. The abrasion of Enamel plus HRi Bio Function is similar to gold and therefore to the natural enamel.

ENAMEL^{plus} HRi[®]

Enamel plus HRi

THE PROBLEM: the refraction of composite & ceramic materials

THE SOLUTION: the same refractive index as natural enamel

Relative refractive index of light (n)

The relative refractive indexes of common materials measured at a temperature of 20°C and with a 589 nm wavelength light indicates the deviation and speed reduction of the light that crosses a translucent area (Vanini Mangani Klimovskaia "Conservative Restoration of Anterior Teeth" Acme 2005)

HRi: the true enamel

HRi Enamel veneers showing natural effects

Application of dentine and opalescent OBN

Different thicknesses of Enamel plus HRi change in shade in the same manner as Natural Enamel would in the same thickness.
Thickness of 0,6 mm allows ideal translucency

- UE1 >>>> low value (amber)
 UE2 >>>> medium value
 UE3 >>>> high value (for children or bleached teeth)

Nanotechnology REM

Enamel plus HRI does not contain TEGDMA and HEMA!

Composition

FILLING (80% WEIGHT - 63% VOLUME)

- Surface-treated zirconium oxide with high refractive index (12% in weight)
- New type of filling glass with high refractive index (68% in weight)

Physical data

	MPa
Vickers Hardness:	700
Flexural Strength:	170
Modulus of elasticity:	14.500
Compressive strength:	450
High radiopacity:	600%AI

For every type of direct or indirect restoration

The HRI project has been devised from Dr. L. Vanini and developed in collaboration with Dr. T. Niemi (Patent Pending).

This project (HA-Project-Nr: 130/07-01) has received special funding from the State of Hessen, co-financed by funds of the European Union (European Social Fund - ESF) for scientific innovation and advancement.

Enamel plus HRi

Dentine

- **Dentine:** with fluorescence and increased translucency calibrated to natural dentine
- **Ultra-light Dentine:** UD0 and UD0,5 for bleached teeth

Additional shade

- **Characterization and intensive effect** created by intensive enamel (IM, IWS, IW) and opalescent amber (OA)
- **Opalescent blue and amber** enhanced by opalescent OBN for 'Master' Technique

Enamel

Universal (low, medium and high value) for anteriors

- **Invisible margin** thanks to high **refraction index** "no "glass effect" lowering the value of the restoration
- **Opalescent effect blue and amber** given by HRi Enamel (Transparency 30% until 0,8 mm)

Function (low, medium and high value)

- **Low abrasion** ideal for posteriors and for laboratory

Operating advantages: simple technique

Clinical cases by Dr. Lorenzo Vanini

"JUST ENAMEL" TECHNIQUE
using Enamel plus HRi universal enamel

"BASIC" TECHNIQUE
using Enamel plus HRi, dentine and enamel

"MASTER" TECHNIQUE
additional shades for opalescence, intensive and characterization

Syringe/Tips heater

Ena Heat Composite Heating Conditioner CHC3

It warms up the composite at the temperature of approx. 39°C, making the material more flowable and reducing the stress in the extrusion from the syringe and stratification phases. In this way, this reduces the risk of separation between the matrix and the filler, it improves the biomechanical characteristics of the composite and it avoids bubbles. It is possible to regulate the temperature at 55°C to obtain even more flowable material for cementation. With 6 spaces for syringes and 4 spaces for tips. Also for warming up sodium hypochlorite and anesthetic.

Ref.	Description	Q.ty
CHC3	COMPOSITE HEATING CONDITIONER ENA HEAT 110-240V, 50-60 Hz, 0.5A, 500 mA Allows to use composite at the ideal temperature of 39°C for modellation and 55°C for cementation	1 pc

Enamel plus Stain & Instruments

Fluorescent Composite Stains

Unique fluorescent stains used for characterization in both the dental practice and laboratory. Due to high fluorescence, they naturally integrate with the natural tooth. Stains can be used alone or mixed with the composite without changing its fluorescent characteristics.

20

Composite Application with Micrium Instruments

Flexible silicone spatulas are suitable for all uses. Composite quickly spreads evenly and without bubbles.

ENAMEL  **HRi Flow^{HF}**
plus

Enamel plus HRi Flow

New Highly Fluorescent "Flow"^{HF}

Material to be used as an underlay in posteriors for direct and indirect restorations (before taking the impression) and in anteriors in Class V. Biocompatible: Bis-GMA-free formula: monomer that can liberate Bisphenol-A (BPA) an organic compound, which, in the human body, behaves like estrogen causing health damage.

- Highly filled
- Higher viscosity and elasticity
- Higher radiopacity and high physical properties
- No Bubble

Glass Connector

Highly flowable body with high elasticity and calibrated light diffusion that reproduces protein layer of natural tooth

- Increases the internal light diffusion in direct and indirect restorations, reducing the decrease in value typical of the vitreous masses (no need with HRi Universal Enamel).
- Increases the dentine fluorescence of non vital teeth.

COSHFOFGC	Enamel plus HFO Glass Connector + 3 tips	1 g

Ena Cem^{HV}

For cementation of aesthetic veneers from temporary to the final element

It's a light-curing, high viscosity, flowable composite, developed by Dr. Lorenzo Vanini, which enhances the aesthetics of ceramic and composite veneers. The high viscosity and the high thixotropy guarantee a perfect handling for an easy application and excess removal.

Characteristics

- High viscosity (600 Psa)
- Highly filled (80% in weight)
- Bis-GMA free
- Fluorescent
- Radiopaque

Advantages

- High physical properties
- Easy application
- Easy excess removal
- Minimum thickness 26 mp
- Completely biocompatible
- High aesthetic

PRODUCT	THICKNESS MPa (FORCE 35N)	VICKERS HARDNESS MPa	YOUNG MODULUS MPa	FLEXURAL STRENGTH MPa	COMPRESSIVE STRENGTH MPa	FILLER (WEIGHT)
Ena Cem ^{HV}	26	941	14.900	154	410	80%

High viscosity composite	> 500	600/700	8000/11000	140	400	75%

Ingredients:

- Glass powder, diurethane dimethacrylate, silicon dioxide, tetramethylene dimethacrylate
- Filler content: 80% in weight of inorganic filler (0,005 - 40 µm)

Available in 5 fluorescent dentine shades and 1 transparent universal

Guaranteed to give perfect chromatic adaption and luminosity to high aesthetic veneers in ceramic and composite

Clinical case by Dr. Lorenzo Vanini

"Spot" etching and application of Ena Bond Seal for temporary cementation

Application of Ena Soft Flow for temporary cementation

Light curing for 60 seconds

1 week later: the temporary is fully integrated and healthy tissues

Application of Ena Cem Try-in gel in the ceramic veneers for the colour preview

Cementation of veneers: adhesive phase with Ena Bond for 40 seconds

Application of Ena Cem^{HV}, after sandblasting, etching, silanizing and application of Ena Bond Seal

Ceramic veneers after cementation

Ena[®]Soft Flow

Light-curing temporary dental filling material

Ena Soft Flow is an elastic material for dental temporary restorations. It has advantage of easy removal in one piece without damage to preparation. Ena Soft Flow is suitable also for long term temporaries because it perfectly maintains the shape of tooth. It can be used also for luting temporary veneers.

Technical & operative advantages

- Ideal for temporary veneer cementation
- Easy to apply: it doesn't stick to the instrument
- It seals the temporary veneers remaining soft
- It can be removed without any residue
- High physical properties (flexural strength 154 MPa)

Application of Ena Soft Flow • Dr. Lorenzo Vanini

Ena[®]Soft

Light-curing composite for temporary restorations

ENA Soft is an elastic material for temporary restorations. It has advantages of easy removal in one piece without damage to preparation. ENA Soft is suitable also for long term temporaries because it perfectly maintains the shape of tooth. It can be used to protect implant screws.

Advantages

- Simple to apply: not sticky
- Easy to remove in one piece
- Suitable for inlay & onlay
- Strong and long lasting fillings
- Easy to remove from implant screws (NB: Ena Soft Flow is not suitable for implants)
- BIS-GMA free

Ena® Etch Porcelain Cementation & Repair

Ceramic repairs and cementation with Hydrofluoridic acid and silane

Silane ideal for increasing the bond between organic resins and the etched surface of porcelain.

Hydrofluoridic acid 9.6% etchant for porcelain veneers and inlays before cementation with composite cements and for fractured porcelain surfaces.

Comparison of different ceramic repair systems

Enamel plus Shiny

Micerium provides everything needed for finishing and polishing of direct aesthetic restorations, laboratory veneers, inlays and crowns made in composite.

28

Shiny finishing & polishing

The system includes

- Diamond paste: SHINY A 3 μ m, SHINY B 1 μ m
- Aluminium oxide paste SHINY C
- Air Block SHINY G
- Brushes and felts SHINY S, SHINY F
- Pre-polishing rubber point SHINY14 & SHINY33
- Finishing accessories

Correction of surface tooth geography

Finishing and polishing: Shiny14 silicon rubber point, Shiny A 3 μ m and Shiny B 1 μ m diamond paste with brushes

Aluminium oxide paste Shiny C with felt wheel; restoration finished and polished under direct light (left) and under polarized light (right)

Surface treatment	Vickers Hardness	Deviation

Adhesive System Ena Bond

One-Bottle: V generation adhesive. Ena Bond is used with Etch & Rinse technique and applied at least in two layers after etching with Ena Etch.

Two-Bottle: IV generation adhesive. Using Ena Bond as a Primer, after etching with Ena Etch, and Ena Bond Seal as a second layer of unfilled adhesive resin, you can get excellent adhesion results and a perfect seal, converting Ena Bond into a Two-Bottle adhesive system.

Self Etching: Bond strenght values over the average industry.

34

* Test made by University of Chieti - Prof. Camillo D'Arcangelo - Dr. Tonino Traini, in comparison with three other adhesive systems (see diagram)

* Comparison of the adhesion data of Ena Bond SE with two other self-etching adhesive systems with Primer University of Chieti (Prof. Camillo D'Arcangelo)

Bonding System

ENA[®] **bond**

ONE-BOTTLE ETCH & RINSE

- Aesthetics & retention
- Fluorescent like natural tooth
- Special ethanol-based composition
- Available catalyst allowing use with dual composites
- Bonding values above the market average: 30 MPa

Microscope scanning of one bottle bonding 2300x and 3000x. The detail evidences the high penetration of dentine enamel bonding into the dentine tubuli (Prof. Vasilios Kaitsas).

TWO-BOTTLE ETCH & RINSE

IV Generation Primer+Resin Adhesive

Using Ena Bond as a Primer, after etching with Ena Etch, and Ena Bond Seal as a second layer of unfilled adhesive resin, you can get excellent adhesion results and a perfect seal, converting Ena Bond into a Two-Bottle adhesive system.

- Excellent adhesion values* - 24 MPa on dentine*

* Test made by University of Chieti - Prof. Camillo D'Arcangelo, in comparison with two other self-etching adhesive systems with Primer

SEM images at 600X and 3000X of the hybrid layer obtained with the two bottles technique, note the amount and depth of resin tags University of Chieti (Prof. Camillo D'Arcangelo)

SELF-ETCHING

- Adhesion values above the market average:
 - 24 MPa on dentine
 - 17 MPa on non-etched enamel
 - 20 MPa on etched enamel
- Special composition in water solution

Etched enamel and dentine treated with Ena Bond SE on electron microscope (SEM)

The microscopy shows the enamel surface and the "resin-tags" that put in evidence the penetration of Ena Bond SE in dentine tubules. University of Tor Vergata Rome (Prof. Francesco Mangani).

Ena[®]Flow Sealant "Bio"

Pit & Fissure Sealant light curing flowable sealant

Easy to use and durable over time. Milky white colour helps the practitioner identify the application during sealing. Fluorescence allows the placement of the material to be checked over time. Long-lasting protection against caries. Low viscosity: filler content 33% by weight.

Characteristics

- Fluorescent for a better control under UV light
- Good wear resistance
- Natural tooth surface sealant
- Composite restoration margin sealant
- BIS-GMA and Bisphenol-A free

CLED2
LED Dental Curing Light

Light curing unit CLED2

One Touch, and you will enjoy the powerful light

The light curing was produced with 10 W ultra-high brightness LEDs of two different frequencies. The light wavelength of CLED2 is between 390-480 nm with peaks at 405 and 460 nm; the intensity can reach 2400 mW/cm². It can cure a composite layer of more than 2 mm in 2 seconds. These characteristics also enable it to act effectively with phenyl propanedione (PPD) photoinitiators and Lucirine TPO. D.

Reinforcing Fibres

PREIMPREGNATED GLASS FIBRE **QUATTRO, DUE & ORTHO** dipped in fluorescent light-curing resin, the same as used for Enamel plus HRI and Ena Post. Silanized and not only impregnated fibres; 0.012 µm filler.

POLYETHYLENE:

ZERO very high molecular weight, surface-treated for good resin bonding.

For increasing physical properties and repairing orthodontic appliances, removable resin prostheses and temporaries of short-lived temporaries.

Technological advantages

- Unidirectional single roads of glass fibre 14 µm
- Very strong resistance to acid and alkaline media
- Higher resistance of finished product
- Stronger chemical connection between fibres
- Increased physical properties

Operating advantages

- Oral application without metal and ultraconservative, easy to repair
- Usable with most acrylics and composites
- No additional investment required
- Ready to use, fast application, reduced costs of treatment, no risk of fraying, during application in the time
- Better chemical reaction with luting and restorative materials & excellent aesthetics

Reinforcement fibres and splints

Tender Fiber QUATTRO for composite bridges Type Maryland or on inlays and resin on implants

Tender Fiber DUE used for splinting of periodontal teeth

Tender Fiber ZERO for removable prosthesis reinforcement

Tender Fiber ORTHO used for retainers and restraints

Model	Ref.	Description	Q.ty
	TF21	TENDER FIBER DUE Glass fibre for periodontal splinting Length 12 cm - ø 1,3 mm (3.200 fibres)	1 pc

	TF01	TENDER FIBER ZERO Polyethylene fibre economic, not impregnated for reinforcement of orthodontic, temporary & removable acrylic prosthesis	17 mt.
	ATF11	TENDER FIBER ORTHO Glass fibre for orthodontic applications Length 12 cm - ø 0,8 mm (1.600 fibres)	1 pc

Special packaging

Fibre holder in silicone to be used for an easy application: measure, cut, apply, cure and check

ENA[®] post

Ena[®] Post

Perfect functional and aesthetic integration with glass fibre post and composite

Available in two conicities 2% and 10%; the colour rings on the post not only indicate the diameter difference but also allow the positioning of the cut (they must be removed before cementing).

40

Ena Post

Operative & technological advantages

- Aesthetic: fluorescent and dentine colour
- Functional: same elasticity of dentine
- Perfectly integrated with the tooth, cement and restorative material
- The only post with silanized fibres inserted in the same resin of restorative material (Enamel plus HRI)
- Perfect silanization and seamless integration of fibres into the resin
- Visible on X-ray only
- Coloured rings for easy identification

Correction of surface geography and polishing

Restoration by Dr. Lorenzo Vanini with Ena Post and Enamel plus HRI

ENA[®] **cem^{HF}**

Ena[®] Cem^{HF}

Composite-based dual cement. Perfect Canal Sealing

Operating advantages

- Highly filled (77% in weight)
- Same physical characteristics as Enamel plus HRI
- No air bubbles
- Minimum thickness <50µm
- Fluorescent and radiopaque (210% AI)

Technological advantages

- Crown & bridge luting
- Post luting & core build-up
- Composite and ceramic veneers, inlay and onlay luting

Physical properties

PRODUCT	Ena Cem ^{HF}	Dual/Cure Flow Cement	High viscosity composite
Thickness Mµ (force 35N)	45	28/55	> 500
Vickers hardness MPa	670	270	600/700
Modulus of elasticity MPa	12850	5471	8000/11000
Flexural strength MPa	116	88	140
Compressive strength MPa	342	216	400
Radiopacity AI	210%	30%	

Analysis under magnification

Images under magnification show homogeneity of Ena Cem^{HF} unlike other Low Viscosity Dual Cure Cement that contains air bubbles

Direct aesthetic restoration and core reconstruction with Ena Cem^{HF} performed by Dr. Lorenzo Vanini

AESTHETIC RESIN TEMPORARIES

Enamel plus Temp

Temporary resin for aesthetic temporary crown and bridge

Very interesting material for opacity and fluorescence of dentine bodies and for translucency of enamel bodies that allow to put in evidence the typical contrast between these two elements in the natural tooth. Enamel bodies also allow to obtain a natural polishing in temporary crowns, similar to the definitive ceramic elements. It can be used both in laboratory with the help of silicone stent or of vacuum forming matrix with the direct technique using a silicone impression or a preformed crown.

1. Direct technique

2. Laboratory technique

1. Teeth before the preparation

Dentine placed into the impression

Cemented and finished temporary

2. Stent and dentine pouring

Characterizations with stains and clear

Enamel pouring and final polishing

Mock Up Kit

For temporary veneers

Temp Silic Mock up is a valuable communication tool between dentist, patient and dental laboratory that allows temporaries (Mock up) to be made using the highly filled fluid composite Enamel plus HRi Flow, an aesthetic material with ideal physical properties.

Operational and technological advantages

- Impression with silicone and clear tray: 45 sec.
- Impression setting: 1 min. 30 sec.
- Veneer preparation
- Flow HRi application in stent: 30 sec.
- Light curing: 60 sec.
- Final light curing with Ena Bond Seal: 60 sec.

Provisional

Cemented temporary veneers
with Ena Soft Flow and final
polymerisation with Ena Bond Seal

Ceramic veneers

Final result after luting with
light-curing flow composite
(like Ena CemHV)

ENAWHITE SYSTEM

It helps eliminate irritating stains caused by smoke and coffee, solves problems of discolouration caused by prolonged use of antibiotics (e.g. tetracyclines) and facilitates the brilliance and evenness of teeth by restoring the smile. Neutral pH formula to protect natural enamel.

Ena® White

System for treatment of pathogen & iatrogenic discolouration

Clinical Case

Vital tooth treated with Ena White Power 35% hydrogen peroxide

ENA WHITE POWER

- **35% HYDROGEN** peroxide for professional treatment in office, results in one visit
- Bicomponent syringe activates only the needed quantity for the application
- Neutral Ph 7.3, no enamel damage
- Use with rubber dam or light curing gingival protection Ena Dam

ENA WHITE REGULAR

- **12% HYDROGEN** peroxide professional treatment in office
- Treatment of non-vital tooth with walking technique
- Safe and effective treatment for sensitive teeth

ENA WHITE LIGHT

- **6% HYDROGEN** peroxide for cosmetic bleaching
- Home treatment, simple and safe maintenance
- Package with personalized label
- Pleasant freshness: mint flavour!

ENAWHITE SYSTEM

Having white teeth today is every patient's dream. Getting a bright smile improves one's self-esteem, self-confidence and relationships with others.

Ena® White 2.0

Innovative brushing technique which accelerates bleaching

The fastest professional home bleaching with in office pre-treatment. Is a system for cosmetic bleaching that uses a 6%-hydrogen-peroxide-based bleaching gel with the special XS151™ accelerator, which activates by brushing; this action exponentially increases the absorption rate of peroxide if compared to traditional bleaching.

48

Bleaching system Ena® White 2.0

Technological & operating advantages

- Easier to use thanks to the toothbrush with dispenser
- Greater comfort for the patient, two minutes correspond to one night with conventional, annoying bleaching trays. No ingestion of hydrogen peroxide.
- Less risk of irritation by reducing contact time: 2/3 min. per day instead of 6/8 hours to achieve the same bleaching result with bleaching trays.
- A conventional 20-day treatment provides approx. 120/160 hours contact time compared to 40/60 min. with Ena®White 2.0.

Pre-filled

Model	Ref.	Description	Q.ty
	ECW01*	ENA WHITE 2.0 PROFESSIONAL HOME BLEACHING SYSTEM Toothbrush filled with 6 ml H ₂ O ₂ gel	1 pc
	ECW01B*	ENA WHITE 2.0 PROFESSIONAL HOME BLEACHING SYSTEM Toothbrush filled with 6 ml H ₂ O ₂ gel Enamel plus toothpaste	1 pc 1 pc
	ECW02	ENA WHITE 2.0 PROFESSIONAL HOME BLEACHING SYSTEM Toothbrush filled with 6 ml H ₂ O ₂ gel	2 pcs

*minimum order: multiple of 24 pcs packed in dispenser of 12 tubes
 N.B. Toothbrushes delivered in separate box for easier fridge stock

Phase 1 • IN-OFFICE

Operating protocol • Where mechanical brushing is performed

- Tartar removal
- Baking soda application with Smart Prophy Pink brush, mounted on contra-angle handpiece (200/250 rpm)
- Application of Ena®White 2.0 gel: leave on for 10 to 15 min.
- Brush the bleaching gel with dry Smart Prophy Pink brush, mounted on contra-angle (max 300/400 rpm) for about 30 to 40 seconds on each tooth
- Filling toothbrush dispenser with Ena®White 2.0 gel from syringe
- After 20 days the toothbrush dispenser can be filled again with bleaching gel

Phase 2 • AT HOME

Home Bleaching procedure

- Daily oral hygiene
- Spill a small amount of gel on the toothbrush and brush the teeth for 30/45 sec.
- Rinse and repeat the treatment a second time
- It is possible to continue the bleaching treatment after 20 days refilling the toothbrush with the same syringe during the follow-up visit
- Additional bleaching with further refills are possible, with minimum intervals of 3 months

Ena[®] Matrix

Wedges and matrices with easy-to-apply tabs and anatomical rings.
Easier than a traditional matrix, more precise than a sectional matrix.

RING

- Ni-Ti ring for an excellent resistance
- Elastic memory which guarantees a long duration and precise contacts
- Autoclavable plastic tines reinforced with glass fibre, for an extraordinary retention
- Better adjustment to the tooth surface to create a cavity with an ideal shape which allows to save time during finishing
- Available in 2 sizes, "Standard" and "Narrow", to ensure an optimal separation strength even in the smaller teeth

ANATOMICAL MATRIX

- Anatomical cervical shape with marginal ridges to reduce the time for finishing. Easier to burnish
- Tines with hole which allow the positioning and removal with the specific tweezers without any problem

Iconographic documentation
by Dr. Francesco Simoni

Colloidal Silver Gel

Silver Line Gel

Gingival Gel based on Colloidal Silver (10 ppm) with Aloe and Cannabis sativa seed extract • Natural antibacterial-antiviral effect

Properties

- Adheres to the oral mucosa
- Forms a protective film
- Concentrated formulation with Colloidal Silver (10 ppm), antibacterial-antiviral effect, neutral pH
- Based on cannabis sativa seed extract, aloe, hyaluronic acid and vitamin E
- Free of fluoride, sugars, mattifying agents, alcohol, fragrances, petroleum derivatives, silicones and parabens

Indications

- Aphthae, Ulcers, Recurrent aphthous stomatitis, Gingivitis, Periodontitis
- Mucositis from radiotherapy and chemotherapy
- Oral surgery, Difficult extractions
- Implantology
- Traumatic ulcers from dentures and orthodontic appliances
- Burning Mouth Syndrome

Benefits

- Gives rapid relief
- Eliminates burning sensation
- Protects the oral mucosa
- Thanks to its antioxidant function ensures the well-being and hygiene of the mouth

Aphthae & Periodontitis Clinical cases by Dr. Francesco Simoni

a) Clinical image of the canker sore
b) Application of silver gel; c) Clinical situation after treatment, the gel soothes the discomfort and speeds up healing

Clinical and radiographic image initial periodontal defect; application of gel; clinical and radiographic image after 12 months, note the bone regeneration.

Peri-implantitis

Case of peri-implantitis treated with Silver Line Gel from 2015 to 2022

Syringe filling

- 1) Removing the plunger and inserting the gel into it
- 2) Assembly of applicator tip
- 3) Plunger insertion

Oral hygiene a daily routine

Ena Oral care The first Micerium oral hygiene line

Through the new line, Micerium S.P.A. intends to offer the end consumer extremely innovative products with high quality standards, in order to adequately support him/her in carrying out daily oral hygiene, and thus combat the main problems related to it, such as dental, periodontal and tissue diseases. It is now possible to achieve prevention and health maintenance goals that were unimaginable until recently, and it is along these lines that Micerium's Research and Development Team, adequately supported by specialists in the sector, has developed 'Ena Oral Care' products, which stand out from those currently on the market thanks to their strong innovative component, which makes them unique.

Digital Brush Mouthwash Chlorhexidine

DB Mouthwash with chlorhexidine 0.12% removes food residues and bacteria while helping to prevent plaque build-up.

DB Mouthwash is indicated in the prevention of infections after dental surgery, in the prevention of dental infections in denture wearers and in the prevention of plaque and tartar build-up. Rinse the mouth for 30 sec. using a spoonful of undiluted product (approx. 10 ml), after normal oral hygiene.

Ref.	Description	Q.ty
ECCL250	CHLORHEXIDINE 0.12% MOUTHWASH In 250 ml bottle	1 pc

Kiss Me Oral Spray

Practical mouthwash effective against halitosis because it eliminates bacteria that can cause bad breath. Fresh mint taste - pocket packaging - gas, alcohol and saccharine free.

Ref.	Description	Q.ty
ECKM1	KISS ME ORAL SPRAY Fresh mint taste spray	20 ml

Oral Hygiene

One of the health conditions that most affects quality of life is oral health. Clinical and research studies have documented the importance of oral hygiene, both as hospital and home treatment. Although, unfortunately, in many cases oral health takes a back seat and is neglected, due to the presence of contingent or more serious problems, such as debilitating diseases, chemotherapy, bedriddenness, disability and handicap.

Clinical cases by Dr. Marisa Roncati, dental hygiene expert

Digital Brush Towel with saline solution

Disposable towel to clean teeth and gums from birth. If one learnt to clean one's teeth properly from birth, one could prevent both caries and gum infections and thus keep one's teeth healthy for life, without the need for any health care.

Ingredients: Water - Na Cl 0.9% - no preservatives. Sterilised with beta rays

Digital Brush Chlorhexidine Towel

With a simple gesture, the towel is wrapped around the finger and then wiped over the surface of the tooth: this removes bacteria, residue and adds shine to the smile. Ideal for post-operative cleaning or when a toothbrush cannot be used. It helps prevent bacterial plaque.

Ingredients: Water, Sorbitol, Denatured alcohol, Propylene glycol, Polysorbate-20, Laurel-10, PEG-40 Hydrogenated castor oil, Chlorhexidine digluconate; Anethole, Aroma, Sodium saccharin, Sodium fluoride.

Ref.	Description	Q.ty

Interdental Floss

Ultra-strong PTFE tape dental floss with elegant "credit card" shape packaging with mirror, can be customised with your own data, making it a perfect tool for promoting your business.

Alternatively, white waxed PTFE roll dental floss (tape).

Ref.	Description	Q.ty
ECIF1	DENTAL FLOSS WITH MIRROR 10 Mt. White waxed, customisation possible	1 pc
ECIFW	ROLL DENTAL FLOSS 50 Mt. White waxed, blister pack	1 pc

Interdental Brush

Interdental brushes with innovative patented double-wave, bristles that adapt to the anatomy of the teeth in the interproximal areas, allowing optimal removal of plaque and food residues

- Nylon bristles with retentive memory
- Ergonomic plastic handle
- Hygienic cap, stainless steel Teflon coated wire, anti-scratch, ideal also around titanium implants

AESTHETIC RESIN TEMPORARIES

Enamel plus Temp

Temporary resin for aesthetic temporary crown and bridge

Very interesting material for opacity and fluorescence of dentine bodies and for translucency of enamel bodies that allow to put in evidence the typical contrast between these two elements in the natural tooth. Enamel bodies also allow to obtain a natural polishing in temporary crowns, similar to the definitive ceramic elements. It can be used both in laboratory with the help of silicone stent or of vacuum forming matrix with the direct technique using a silicone impression or a preformed crown.

Operating advantages

- Polymerisation in laboratory or in the mouth
- Does not exceed 57°C
- High precision of insertion
- Easy to repair, creamy consistency
- Cadmium-free, no tertiary amines

1. Direct technique

2. Laboratory technique

1. Teeth before the preparation

Dentine placed into the impression

Cemented and finished temporary

2. Stent and dentine pouring

Characterizations with stains and clear

Enamel pouring and final polishing

Enamel plus Tender

Appearance of natural tooth, technique and aesthetics of ceramic

Micro-hybrid composite that can be used both directly in the mouth and in laboratory with a high elasticity dentine body, a paste opaque and a bonding that guarantees a unique adhesion. **LIKE CERAMIC BETTER THAN CERAMIC ...** It is possible to make adjustments also in the dental practice with the same material used in the laboratory. Enamel plus HRI can be used both for luting, making in that way at the same time a relining of the manufactured article, and as a liner, before taking the impression (available also "flow"). It allows more possibilities in implant solution and it is ideal for combined cases.

64

Tender Aesthetic Composite

Physical Properties	HRI	Tender
Vickers hardness:	700 MPa	350 MPa
Modulus of elasticity:	14.500 MPa	6.900 MPa
Flexural strength:	170 MPa	95 MPa
Compressive strength:	450 MPa	360 MPa
Transparency:	30%	4%

TENDER: High elasticity dentine body

HRI: high resistance enamel body

THE WINNING MATCH

Before and after case by Dr. Lorenzo Vanini and Mr. Daniele Rondoni

Complex fractures (Dr. Lorenzo Vanini)

Cementation and possible adjustments made always with the same material

Preparation: "HFO Flow" can be used as liner

Composite inlay cemented with "HFO OW" (Dr. Lorenzo Vanini)

Composite build up on implants: Tender opaque

Pressing technique with flask: Dentine

Pressing technique with flask: Enamel

Completed case by Mr. D. Rondoni

Vacuum Mixer Vacumix WD700

WD700 mixer combines use simplicity with optimal performances. Suitable for mixing WITHOUT AIR every type of plaster, investment and silicone. Powerful and silent, equipped with vacuum pump that works also for dry-mixing and electronic timer. Available with wall or table support. The unit is equipped with a 500 cc bowl. Five types of bowls with different size available on request: 200, 500, 1000, 2000 cc. WD700A model with adjustable speed available on request.

Ref.	Description	Q.tà
WD700	VACUUM MIXER 400 RPM 0,8 BAR also for partials, 500 cc bowl both wall and table support	1 pc
WD711	Mixing bowl 200 cc with filter	1 pc
WD712	Mixing bowl 500 cc with filter	1 pc
WD713	Mixing bowl 1000 cc with filter	1 pc
WD714	Mixing bowl 2000 cc with filter	1 pc
WD711A	Mixing bowl 200 cc for alginate	1 pc

Technical features WD700

Voltage	230V - 140 watt
Motor	12N/M
Base	22x16 cm (30x28 cm table support)
Height	30 cm (61,5 cm table support)
Weight	8,5 Kg (10 Kg table support)
Pump	- 0,8 bar, 10 lt per min.
Speed	400 RPM

Router for models Rutex PX801-CE

For excellent model finishing

IN REAL COMPOSITE MATERIAL

Ena Cad

Perfect Functional and Aesthetic Biocompatibility

NEW

Ena Cad discs and blocks can be used to fabricate fully anatomical monolithics, inlays, crowns and suprastructures for functional, aesthetic rehabilitation also on implants. Ena Cad has a hardness similar to restorative composites. It is not as hard as zirconia, dental ceramics or other polymers and hybrids. This makes it easier to be milled and its physical characteristics are closer to those of natural teeth than other restorative materials, allowing it to absorb chewing stress better and making it the ideal material for inlays/onlays, crowns, implant overstructures.

Discs and blocks are available in the monolayer version in the following shades: UD0, UD0,5, UD1, UD2, UD3 and UD3,5. Shades UD1, UD2, UD3 and UD3,5 are available also in multilayer discs to offer additionally a better aesthetic integration especially in anterior area.

Physical properties

Vickers hardness:	680-700 MPa
Modulus of elasticity:	9.500-10.000 MPa
Flexural strength:	160-180 MPa
Compressive strength:	475-495 MPa
Filler content:	70% (weight)
Radiopacity:	210% (aluminium)

ENA CAD Blocks

Available in Monolayer blocks (14,7x14,7 mm x h.18 mm)
